

Operators

14 June 2026 09:10

Operators:

1. Operators is symbol that perform an operations

Operand: value on which operation works

Type of operators:

1. Arithmetic operators
2. Assignment
3. Relational
4. Logical
5. Increment and decrement
6. Ternary
7. Unary
8. Bitwise
9. Shift
10. Instanceof operator

Arithmetic operations

Operator	Description
----------	-------------

+	Add to values
-	Sub
*	Mul
/	Div
%	Rem

String Concatenation with +

When + is used with number , it adds

When + is used with String, it joins

Compound Assignment operators

Operators	Description	How to use
+=	Add and assign	r+=10
-=	Sub and assign	r-=1=;
*	Mul and assign	
/=		
%=		

Relational operators

Relational operators are used to test comparison between operands or values

Note: they always return true or false

Operator	Des
>	Check if operand on left side is greater then the operand to the right side
<	Check if operand on left side is smaller then the operand to the right side
>=	Check left operand is greater then or equal to right operand

<=	Check left operand is smaller then or equal to right operand
==	Check if <u>two operand are equal</u>
!=	Check if <u>two operand are not equal</u>

Logical operators

Logical operators are used to combined conditions

Note : they also return true or false

Operator	Des
&&	Return true only when both condition are true
	Return true if at least one condition is true
!	True become false , false become true

A	B	A AND B	A OR B	NOT A
False	False	False	False	True
False	True	False	True	True
True	False	False	True	False
True	True	True	True	False

Increment and decrement

Increment increase value by 1 == a++;

Decrement decrease value by 1 == a--

Post increment and post decrement

Post : a++

Pre: ++a

Post des: a--

Pre des: --a

Note:

Pre --> first do increment/dec then operation(+,-,=)

Post --> first do operation then incre/dec

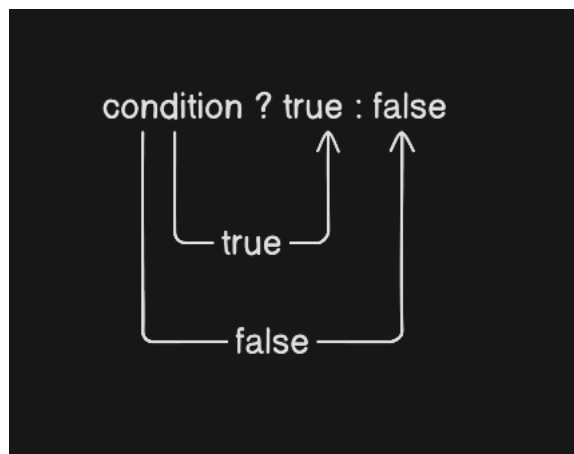

int k=5;

int r=++k + ++k - k-- + k++ + k--;

6 + 7 - 7 + 6 + 7 =19,6

Ternary operator

Condition ? True : false:

Example:

```
Int a=6;  
Int b=a++ + ++a - a-- + --a;  
      6 + 8  
Sop(a) //  
Sop(b) //
```
